Disability and Psychoeducational Studies

We are dedicated to the empowerment and effective inclusion of culturally diverse people of all ages with disabilities and special abilities. We’re also home to the state’s only programs to prepare rehabilitation counselors and educators of the deaf and blind.

You can choose from four areas: Rehabilitation, School Counseling, School Psychology, or Special Education.

Educational Policy Studies and Practice

In EPSP, you’ll find Educational Leadership and the Center for the Study of Higher Education (CSHE), combining a K-12 focus with postsecondary education.

Educational Leadership students engage in a rigorous program of classroom instruction, research projects, and practical learning experiences.

The CSHE is committed to social justice in higher education and brings findings from academic literature to life in ways that enhance student ability.

Teaching, Learning, and Sociocultural Studies

This department brings together Language, Reading, and Culture — with its focus on theories and practices related to language, literacies, and multiculturalism — and Teaching and Teacher Education, which concentrates on everything from environmental learning and early childhood education to elementary mathematics and science.

TLS has two more options for graduate students:

Teach Arizona is a one-year, fast-track master’s program. Math and Science Teacher Education/Retention Industry Partnerships is a three-year master’s program that takes teachers into industry through paid summer internships.

Educational Psychology

We offer an integrative emphasis on research methods (measurement, statistics, and program evaluation) and various content areas in education (motivation, learning, instruction, and development). Our students are active and successful researchers who compete for research grants and publish in scholarly journals.
